*\*requires login name and password to download*

**Resolved Issues:** **Module serial number not recognized when connect on the EVO**  
When the NV780 is connected to the communication bus of the EVO, the serial number of the module will now show the correct serial number and you will be able to assign the module to a zone on the system.  
With the previous version, in a small amount of cases we found that the module serial number broadcasted on the communication bus was wrong, therefore when trying to assign to a zone it would reject it.
