

## Product Information

**Date:** *June 3, 2014*

**Product:** IP150 Internet Module

**Subject:** New release version 1.26

**Downloads:** To download the firmware V1.26, [click here](#)  
For the firmware upgrade instructions, [click here](#)  
\*requires login name and password to download

**Resolved Issue:** **Improved Web Security**

Fixed a security breach with HTTP and HTTPS. HTTP will now deactivate when HTTPS is used, in previous version, the HTTP would still be available if HTTPS was selected.

**Improved communication with email servers**

In certain conditions, handshaking protocols with certain email servers were not always respected. As a result, emails were being delayed or not always sent.

**Fixed DNS timeout**

ParadoxMyHome DNS refresh times have been adjusted to avoid IP150 modules being disconnected for long periods of times when the end user's public IP address changes .

**Improvements:** **Registration on [www2.paradoxmyhome.com](http://www2.paradoxmyhome.com)**

A validation process has been added to ensure proper communication between the iParadox app and the IP150 module on a crowded cellular network. In the previous version, from time to time, users could experience timeout errors in the app when trying to connect.

**Contact:** If you require any additional information or if you have any questions, please do not hesitate to contact our Support department.
