**requires login name and password to download*

New Feature: An added sequence has been incorporated to turn off the siren by using the disarm button on any of the first 10 remotes that were learned.
**See resolved issues for more details.*

Resolved Panel supervision triggering needlessly

Issues: The SR150 on rare occasions would trigger a panel loss sequence therefore beeping until the disarm button on one of the first 10 remotes was pressed. This issue has been corrected and in the event of a supervision loss it will report to the keypad.

Resolved intermittent bell squawk

In some cases the SR150 would emit an intermittent bell squawk. This issue has been resolved in version 2.20.
