

Product Information

Date: *December 8th, 2014*

Product: IP150 Internet Module

Subject: New IP150 firmware version 1.32 release.

Downloads: To go to the IP150 download page, [click here*](#)

**requires user login name and password to download*

New Features: **UC300 Universal Converter Support**

Enables reporting of events/alarms from any security control panel to Paradox IPR512 or IPRS7 receivers via IP and cellular network.

For more details on the UC300 features, [click here*](#)

**requires user login name and password to access all documents*

Resolved Issues: **Improved communication with email servers**

With the new firmware release for the IP150, when configuring email, the user name in the outgoing server SMTP is used regardless of whether an email is selected in the email account.

In the previous version we were using the 1st email as the sender, so if this information was not programmed, an email would not be sent.

PCS250/G backup reporting

In the combo mode, when using an IP150 and a PCS250 with EVO panel, if there was a lost supervision event, the PCS250/G would not report to the central in backup mode. This has now been corrected with the release of version 1.32 and the lost supervision will report to the central.
